Wednesday, September 14th, 2011, the Metro Orlando Economic Development Commission honored E.R. Precision Optical and presented Mark Hess, CEO and President of the company with the 2011 William C. Schwartz Industry Innovation Award.

"E.R. Precision Optical, based in one of Orlando's Historically Underutilized Business (HUB) Zones, recently invested significantly to create an in-house system that allows them to grow germanium & silicon crystals - critical materials used for night vision in targeting and surveillance applications by the U.S. Military and Department of Homeland Security. They are the only U.S. based manufacturing company to supply these critical materials (produce both Ge & Si), keeping important manufacturing jobs here in the U.S."

E.R. Precision Optical was one of the Orlando area companies including Lockheed Martin, Universal Orlando and the Nemours Children's Hospital to receive the award. The award, named in honor of the late William C. Schwartz, a local business pioneer and innovator within the field of optics and photonics, recognizes companies that have a significant effect on the region through innovative practices, products or ideas.
